

Supporting care staff to spot when people are unwell or getting worse and get the right help quickly

It's not always easy for carers to communicate their health concerns about a person they're looking after.

We are training more and more carers to use the RESTORE2 tool to help them to...

Recognise when someone may be deteriorating or at risk of physical deterioration (soft signs)

Escalate concerns to enable healthcare professionals to prioritise who need to be seen quickly (NEWS2 and ReSPECT)

Get their message across to get the right help quickly (SBARD)

RESTORE2 will support **Right Care, Right Time, Right Place, Right Person**
