

NIV 5 care bundle

Appropriate case selection - NIV is only recommended in acute Type 2 Respiratory Failure where it is proven to be effective.

Treatment Escalation Plan in place – ReSPECT form to be completed.

NIV to be started within 60 minutes of decision to treat.

Inspiratory pressure of 20cmH₂O to be achieved within 60 minutes.

Arterial or capillary blood gas to be repeated within two hours of starting NIV.

Improving NIV care

This project aims to reduce mortality rates to 10% or lower for patients who require acute NIV for Type II Respiratory Failure by consistent regional use of the NIV 5 care bundle.
