

Implementing FeNO testing in primary care – Swift PCN project evaluation

The West of England AHSN worked with Swift PCN to support the implementation of FeNO testing across their practices. A mobile model was predominantly used with devices shared between and moving around multiple practices.

The project took place between November 2021 and December 2022.

8 practices offering FeNO testing

Virtual education series delivered with 66 attendees

405 patients reviewed

100% of staff feel FeNO testing has supported their diagnosing (4 survey respondents)

3 staff workshops delivered with 30 attendees

73% of patients feel more able to manage their symptoms (22 survey respondents)

33 patients diagnosed with asthma
