# TheAHSNNetwork

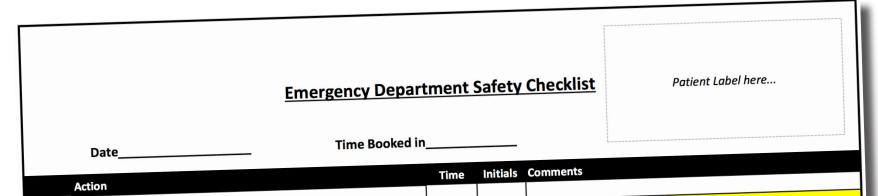

# Improvement

# West of England ED Collaborative

# Working together to spread the Emergency Department Safety Checklist

## **Background and aim**

Overcrowding has an impact on the ability of staff in the Emergency Department (ED) to deliver safe care. Delays in recognition and treatment of severe illness are common, with associated poor outcomes. This is particularly problematic for patients suffering with strokes, heart attacks or sepsis.

Staffing challenges in the ED workforce often results in a reliance on agency staff and non-ED trained staff. As staff become overwhelmed by tasks needing to be complete as well as constant interruptions, there is a risk of omissions in the delivery of basic care elements, which contributes to harm and difficulty in identifying the deteriorating patient in a crowd.

Following a successful pilot at University Hospitals Bristol NHS Foundation Trust (UHBristol) funded by the Health Foundation SHINE innovation programme in 2015, the West of England Academic Health Science Network (AHSN) supported the remaining trusts across the West of England region to successfully introduce the ED Safety Checklist within their own EDs.

#### By implementing the Checklist, teams aimed to:

standardise and improve the delivery of basic care in EDs
improve resilience in EDs during periods of over-crowding

• improve the safety and clinical outcomes for patients accessing ED.

## Method

Implementation was delivered using the Institute for Healthcare Improvement (IHI) model for improvement, which allows each ED to benefit from the pilot learning and also encourages local adaption. Quality Improvement methodologies used included Plan, Do, Study, Act (PDSA) to test the ED Safety Checklist, measurement strategy with baseline, and ongoing key performance metrics to measure the impact.

To support the roll out across the West of England, we developed an ED Safety Checklist toolkit. The toolkit includes a project plan, educational/promotional material, data collection tools, role specifications and a generic dashboard.

The ED Collaborative was set up in August 2016 with a primary focus of implementing the ED Safety Checklist. It is an opportunity to regularly share learning and discuss issues. The West of England AHSN hold regional learning set events twice yearly, which provides staff the opportunity to regularly share learning, discuss issues, and receive the latest updates.

The ED Safety Checklist acts as an aide-mémoire for busy staff to ensure vital sign observations, tests and treatments required by patients are completed in a time-based sequence. This makes it clear what has been done and what needs to be done. By following this structure, any doctor, nurse, bank or agency staff can join the department and provide the right care.

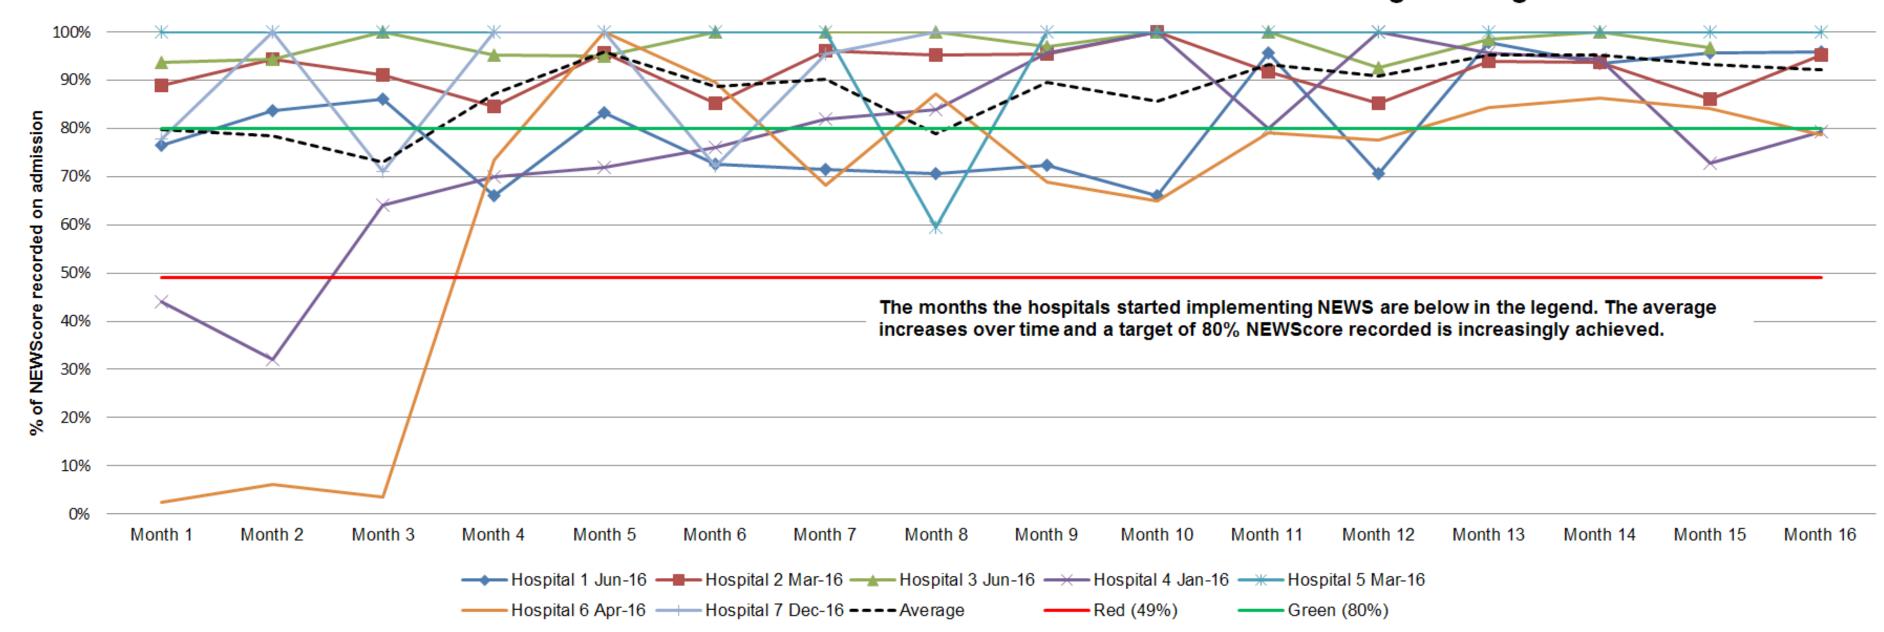

Staff culture was an important point to consider in the roll out of the ED Safety Checklist. The ED Safety Checklist was initially seen as over-prescriptive in tasks so there was some reluctance to accept they were not already being performed well. By providing staff with demonstrable evidence and sharing patient stories they were able to understand the importance of the ED Safety Checklist and the link between the cumulative effect of several omissions in basic care through to unrecognised deterioration and harm, so that they might realise improvements in their own settings.

Conclusion

The ED Safety Checklist is now nationally recognised and NHS Improvement has recommended all trusts use it. Based on our learning, our recommendations for successful implementation are:

- The Checklist should be integrated with current processes, eg included within the current booklet/paperwork.
- Monitoring of the ED Safety Checklist in terms of compliance and quality.
- Strong leadership from senior nursing and medical leads
- Staff to be involved in the implementation through a trial and feedback process.
- The ED Safety Checklist is presented as a departmental

A full evaluation of the implementation of the ED Safety Checklist is due to be published in late 2017 by the Collaboration for Leadership in Applied Health Research and Care (CLAHRC) West.

NEWScore measured on admission to ED across the West of England region

tool for all to ensure patient safety.

## Presented at Patient First 21-22 November 2017

**Resources:** to help support trusts to implement the ED Safety Checklist we have produced a number of resources, including an implementation toolkit which can be found on our website **www.weahsn.net/ED-Checklist**
